

UK Government Actions

Changes are happening nationally...

2030

The end of the sale of all new petrol and diesel cars and vans

Government is also considering:

- Phasing out new diesel and petrol heavy goods vehicles (HGVs) by 2040
- Central government vehicle fleet to be zero emission by 2027, three years earlier than planned

Government is also considering:

- All new home chargers to be smart by law i.e connected and intelligent
- A zero emission vehicles mandate which would require manufacturers to increase the proportion of battery electric vehicles they sell. This would boost uptake and bring more electric cars onto the second and third hand markets.

2035

All new cars and vans must be fully zero emission at the tailpipe

£2.8 billion

Package to support the phase out dates

Gov't says: its top priority is accelerating the shift to public and active transport, increasing the share of journeys taken by cycling and walking.
