

## Should I buy a used EV?

Example of recent used EVs on the AA website

- The Used Car market is growing fast
- There's a wide choice for prices and models
- Battery warranty is typically 8-10 years but 100,000 miles or more of use is not unusual
- Battery "wear" primarily affects the maximum range of the car, this will be visible on the dashboard display
- As an EV battery ages it's unlikely to suddenly fail completely
